Education

Bhagwan Mahavir University — Surat, India
B.Tech Computer Engineering *CGPA: 9.1* — Oct 2022 – April 2025

Experience

Msquare Labs — Remote
Founding Engineer — Oct 2022 – May 2026

- Scaled **Tasks** from **100K to nearly 1M users** on AWS while company **revenue grew 200%**; Apple-featured in 100+ countries with a 4.8-star App Store rating.
- **Owned backend infrastructure end-to-end**; managed all deployments, observability systems, and architecture decisions while maintaining **99.99% uptime**.
- Built custom sync engine from scratch using a **modified CRDT architecture**, replacing CloudKit to support real-time collaboration; achieved **sub-500ms p99 latency globally** and cut sync complaints by 90%+.
- Rewrote backend from Node.js to Go (Gin), achieving **4.6x latency improvement** (p99: 1s → 220ms).
- Integrated observability using **Loki, Grafana, and Tempo (LGTM Stack)**, enabling real-time debugging; resolved **80% of recurring production errors** through improved visibility.
- Built a production **ReAct agent on Amazon Bedrock AgentCore** for Tasks, handling **100K queries/day at peak**: natural language to structured tasks, plus automatic tags and suggestions.
- Wired the full AgentCore stack: **Runtime** (hosting), **Gateway** (tool access), **Memory** (short and long term), **Identity** (least-privilege permissions per agent), and **Observability**; used run traces to fix tool definitions, prompts, and human handoff.
- Built Karo's WhatsApp agent as a **LangGraph workflow**, using **MCP** tools to read user data and take scoped actions.
- Built the Tasks web app with a **viewport-based rendering system**, scaling from **100 to 100K tasks** without memory bloat; maintained ∼**150MB memory** at 100K tasks.

Mela (YC W21) — Bangalore, India
Software Engineer, Full Stack — Aug 2021 – Nov 2022

- Architected distributed web scraping system with **50+ Chrome instances across 20 nodes**, processing **1M+ pages/day** with rotating proxies and automatic failover at **95%+ success rate**.
- Built automated PlayStore deployment pipeline via Selenium + Google APIs, managing **5,000+ apps with 100+ daily updates**; productized as a SaaS offering at $80K/yr ARR.
- Optimized backend file storage via compression and S3 lifecycle policies, reducing storage costs by **76%** (**$5K** → **$1.2K monthly**).
- Took ownership of backend architecture after manager departure; led technical decisions for **10 core services** at **99.99%** availability.

Zulip (Open Source) — Remote
Google Summer of Code Mentor (2024) and Contributor (2021, 2022) — 2021 – 2024

- Selected as one of **26 mentors** for Zulip's GSoC 2024 program; mentored a contributor end to end and submitted the **formal midterm and final evaluations** that decided pass/fail.
- Contributed **57+ merged PRs** and over **100+ commits**, spanning full-stack features, CI stability fixes, and major refactors.
- Built **"Emoji Status"** feature, headlining Zulip v5 release; now used by **1000+ organizations**.
- Performed root cause analysis on **20+ flaky** Puppeteer tests causing ∼**5%** of CI failures; eliminated false negatives through timing and race condition fixes.

Projects

PicsAI — *Figma Plugin, Image Generation Models*
Figma plugin with **17K+ users**, built with my twin brother in the early days of image generation models. Lets designers generate and search AI assets without leaving Figma; trended on Figma Community at launch.

Skills

Languages:	Go, Python, JavaScript, TypeScript, C, Bash
Frameworks:	Gin, Django, React, React Native, Express, NextJS, Puppeteer, Celery
AI/ML:	AI Agents (ReAct), Amazon Bedrock AgentCore, LangGraph, MCP, RAG, LLM APIs, Prompt Engineering, Vector Search, LoRA Fine-tuning
Databases:	PostgreSQL, Redis, MongoDB, Firebase, Milvus, Elasticsearch
Cloud/Infra:	AWS (EKS, EC2, ASG, Lambda, SQS, S3, Aurora PostgreSQL, CloudWatch), GCP, Docker, Kubernetes, Grafana Stack

Awards & Recognition

- **RevenueCat Ship-a-ton 2024, 1st place** (Most Likely to Make Money): for *Karo*, picked from 400+ apps; TechCrunch-covered.
- **Code Storm Winner**: won Gujarat Technological University's coding contest at 17 (500+ participants).
- **Engineering Blog Feature**: post on backend tuning reached **70K+ reads** and 600K+ impressions.
- **Speaker**: spoke at the Local-First community in San Francisco and at the IIT Bhilai FOSS Community.
